                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a Murc gene encoding a Staphylococcus aureus UDP-N-acetylmuramate:L-alanine ligase (Murc polypeptide). Host cell containing an expression system comprising the Murc gene can be used for the recombinant production system comprising the Murc gene can be used for the recombinant production of the polypeptide. Agonists or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

A single-stranded DNA (or its complementary strand or the corresp. A single-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a Kit for the immunodetection of saureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scaled skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                    by amino acid sequence homology to Bacillus subtilis tRNA synthetase encoded by the tyr5 gene. The enzyme catalyses the aminoacylation of tRNA-Asp, by a two step mechanism. The first step involves formation of a stable enzyme:aspartyl adenylate complex resulting from the specific binding and reaction of ATP and L-Aspartate. Subsequently, the 3' terminal adenosine of enzyme-bound tRNA-Asp reacts with the aminoacyl adenylate, leading to the esterification of the tRNA and release of AMP. Vectors comprising the DNA (or polynucleotides having at least 70 % identity to it) can be used for the recombinant production of the enzyme. The enzyme or its related DNA (through gene therapy) is used to induce an immunological response in a mammal to generate antibodies to protect against disease. The antibodies protect against invasion of bacteria, e.g. by blocking adherence of bacteria to damaged tissue, including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          markers for human genes transcribed in-vivo, facilitate tagging of most human genes

Example 4; Page 268: 500pp; English.

The Expressed Sequence Tag was isolated from a human brain cDNA
library as part of a large set of ESTs which can be used as markers
for human genes transcribed in vivo. They can be used to facilitate
tagging of most human genes, for mapping locations of expressed genes
on chromosomes, for individual or forensic identification, for mapping
locations of disease-associated genes, for identification of tissue
                                                                                                                                                                                                                                                                                                       DNA encoding aspartyl-tRNA synthetase from Staphylococcus aureus WCUH 29 - useful for protection against bacterial infections Claim 4; Page 18; 31pp; English.

The present sequence encodes a novel aspartyl tRNA synthetase protein from Staphylococcus aureus strain WCUH29 (NCIMB 40771), which is relat by amino acid sequence homology to Bacillus subtilis tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (SMIK) SMITHKLINE BEECHAM Hodgson JE, Lawlor EJ; WPI; 97-365940/34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-JAN-1997; 300314.

PS Claim 1; Page 1244-1245; 3271pp; English.

CThis sequence represents one of 5191 Staphylococcus aureus DNA sequences confite invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access comemory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the Staureus DNA sequences allows putative functions to be assigned so commercial therapeutic or condustrial importance can be obtained. Specifically, sequences which are clikely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against Staureus infection. The composition against Staureus infection. The computer is a sample. Staureus is implicated in numerous human diseases, including cellulities, eyelid infections, food poisoning, osteomyelitis, concluding cellulitis, eyelid infections, scaled skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.

PS Claim 8; Page 143-144; 178pp; English.

CC T40032-T40042 represent exons of the wild type human presentlin-1 (PS-1)

CC sequence (see T40028 and T40029 for the two CDNA forms of PS-1). The PS-1

CC form represented by T40029 results from alternate splicing of the genomic

CC DNA sequence. T40031 represents the coding sequence for wild type human

CC PS-2. The presentilins are a family of highly conserved integral membrane

CC proteins with a common structural motif, common alternate splicing

CC patterns, and common mutational hot spot regions. Mutations in PS genes

CC are implicated in familial Alzheimer's disease (AD) and possibly other

CC diseases such as cerebral haemorrhage, schizophrenia, depression etc., so

CC detection of mutations in these sequences can be used for diagnosis of

CC containing antisense sequences, antibodies selective for mutant forms of

CC containing antisense sequences, antibodies selective for mutant forms of

CC expression are potentially useful for treatment of AD etc. Transgenic

CC animals are useful as models for drug screening. The antibodies can also

CC be used e.g. for affinity purification and in immunoassavs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-OCT-1996.

DNA constructs containing cotton fibre genomic clone 15-1. DNA constructs containing cotton fibre cells with altered phenotype, especially altered colour. Genes involved in the production of melanin (e.g. tyrosinase colour. Genes involved in the production of melanin (e.g. tyrosinase colour. Genes involved in the production of melanin (e.g. tyrosinase condition of mono-oxygenase genes possibly in conjunction with a ctryptophanase gene) are of interest. The promoters of the invention are creliable and permit expression of a protein selectively in cotton fibre confict qualities such as fibre strength, length, colour and dyability cas required. The construct and methods can also be used for the plant hormone. In particular, fibres from a plant producing coloured confibres may be used to produce yarns and/or fabrics that do not require dyeling.

This genomic DNA sequence comprises exon 12 plus flanking regions of the human presenilin-1 (ApS1) gene. Flanking genomic sequences (see T99661-71) for exons 1-13 of the ApS1 gene, as well as ApS1 cona clones (see V04666-67), are provided. Mutations in the human presenilin genes have been linked to the development of familial Alzheimer's disease (FAD). Presenilin nucleic acids and proteins can be used in screening and diagnosing FAD, identifying and developing therapeutics for treatment of FAD, and in producing cell lines and transgenic animals useful as models of FAD. This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or condustrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The CC saureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 477; 2245pp; Japanese.

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed CDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-cuntranslated sequence is unique to a particular mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

PT New polynucleotides encoding human secreted proteins - derived from PT e.g. human blood, kidney, foetal lung, placenta, testes, brain, PT ovary, pituitary, retina and colon cDNA libraries

PT ovary, pituitary, retina and colon cDNA libraries

Cclaim 1; Page 588; 641pp; English.

CC The present sequence represents an expressed sequence tag (EST), and is color proteins encoded by them are predicted to are all secreted EST sequences isolated from a variety of human tissue cources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and canimals, although no supporting data is given. Suggested activities and activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and inflamentary anti-inflamentary.
                                                                                                                                           Query Match 73.7%;

Human Gene Slynature, 3'-directed DNA sequence. We are not
submitting the same cDNA sequence redundantly to DDBJ since 1993.
For the abundance information of clones with this sequence in this
library and as well as in other 3'-directed libraries, see '
http://www.imcb.osaka-u.ac.jp/bodymap'. The sequences of the clones
represented by this GS sequences is also found there.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      modified polylinker; 1st strand cDNA was prepared from neuroendocrine lung carcinold, and was then primed with a Not I - ollyo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                /note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from neuroendocrine lung carcinoid, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was provided to the Not I and Eco RI sites of the modified pT7T3 vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the K-1735 (mouse) melanoma. It is a filamentous ascomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            by Matthew Clark (Lehrach lab; ICRF, London and Max Planck Institut fuer Molekulare Genetik, Berlin). CDNAs for EST analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (56 h) libraries. Fingerprint data were used to computationally cluster CDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /tissue_type="26 somite embryos, adult livers, shield

The sequence tag present in the cDNA between the NotI site and the
Oligo-dT track served to identify it as a clone from the normalized
adult Spleen library. CDNA Library Preparation: M. Fatima Bonaldo,
ph.D. Clone distribution: clones will be available through Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genetics The following repetitive elements were found in this cDNA sequence: 24-90, >ID4#SINE/ID Seq primer: M13 Forward.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AI045436.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    brain, liver, kidney, heart, spleen, overy, and muscle. The UI-R-EI library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CI) was constructed as follows: PCR amplified cDNA inserts from UI-R-CO clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-CO library in the form of single-stranded circles. The remaining single-stranded cloum chromatography, converted to double-stranded circles and electroparated into DHIOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (bases
